

# TANGENT

---

A Tangent is defined as “a line that touches but does not intersect a curve.” It is a word that describes geometry, but also one used to describe heading off in directions unknown. Both definitions are appropriate for our new collections of decorative stone mosaics, in which abstract geometry and mid century modern design influences merge with the beauty of natural stone, creating a richness that will beguile you anew each time you see it.

| <b>Cleaning and Maintenance</b>  |      |          |         |
|  Protect from harsh abrasive cleaners and tools<br><i>Recommended:</i> Oceanscare or Dry Treat products for all natural stone |      |          |         |

**Notes:**

- We recommend sealing all natural stone products with a penetrating sealer and sealing all porous non-polished stone (limestone, tumbled marble, etc.) prior to grouting. This prevents grout from staining or affecting the color of the stone. Stone is a natural product, and care should be taken to protect it from harsh abrasive cleaners and abrasive cleaning tools.
- White thin-set or mortar is required: light limestones, tumbled stones, "antiqued stones", and light colored marbles
- Likely identified with dry seams, pits, fossils and glass veins that are often filled at the factory. The fill may perhaps leak through the voids. In this case, refilling these voids may be a necessary maintenance procedure.

|                            | Protect from harsh abrasive cleaners and tools<br><i>Recommended: Oceanscare or Dry Treat products</i> |     |          |      |

**Notes:**

- We recommend sealing all natural stone products with a penetrating sealer and sealing all porous non-polished stone (limestone, tumbled marble, etc.) prior to grouting. This prevents grout from staining or affecting the color of the stone. Stone is a natural product, and care should be taken to protect it from harsh abrasive cleaners and abrasive cleaning tools.
- White thin-set or mortar is required: light limestones, tumbled stones, "antiqued stones", and light colored marbles
- Likely identified with dry seams, pits, fossils and glass veins that are often filled at the factory. The fill may perhaps leak through the voids. In this case, refilling these voids may be a necessary maintenance procedure.
